- When correcting timed test I only correct the highlighted portion of each test. (Right side first 12 facts listed vertically) Each fact will be presented somewhere within a random order of the timed test. Do not tell my students this! However, consider themselves lucky they sneak and correct response past me.

- I have included a tiny little symbol: \wedge on every timed test to show you were to stop correcting if you are using my shortcut. So simply start correcting at the top of the right column of the timed test, and stop when you see the symbol \wedge . This signals you that you have corrected at least one of every fact (1-12) for the individual student.

- Also at the bottom of every timed test (besides the doubles) Each test is marked with a small A, B, C, or D. Each test (besides the doubles) comes in 4 different versions. This allows students that have to retake a timed test to see a different version of it. My students must pass off the B, C, and D version of the mixed review order to say they have passed off their multiplication facts.
